Thumb to be placed in space intersecting White, Red, and Green Buttons.

Button Mappings in Razer Synapse:

Recommended to uninstall this software after saving to memory

Basic Mode

Activation: *no modifiers are pressed*

Operations: *basic mouse functions, web browsing, window navigation*

Lclick	– lclick	
Rclick	– rclick	
Scrollup	– scrollup	
Scrolldown	– scrolldown	
Scrollleft	– ctrl +w	(close tab on Chrome and other programs)
Scrollright	– ctrl + t	(open tab on Chrome and other programs)
MClick	– mclick	
Back	– Go back	
Helper	– Minimize current active window	

Hypershift (better called *Web Browsing*) Mode

Activation: *hypershift is pressed and held*

Operations: *web browsing*

LClick =>	ctrl + shift + tab	(switch to leftward tab, hold to advance fast; increase indent of list in word editor)
RClick =>	ctrl + tab	(switch to rightward tab, hold to advance fast; increase indent of list in word editor)
Scrollup	– scrollup, via PgUp press	
Scrolldown	– scrolldown, via PgDn press	
Scrollleft	=> ctrl + shift + t	(reopen closed tabs)
Scrollright	=> ctrl + r	(reloads page)
MClick	=> Alt + F1	(closes current program, shutdown controls on desktop)
Back	– Go forward	
Helper	=> cycles DPI	

Back (better called *Revision*) Mode

Activation: when only the Back is pressed and held

Operations: text and carat manipulation, undo and redo, long-form selection

LClick => alt + lclick (mouse click with **modifier key-press**, use for duplicating carat in editor)
modifier key-press – *alt* in VSCode, *ctrl* in all other cases

RClick => shift + lclick (mouse click with **shift**, use to select long bodied text)
only when pressed by itself without having done anything else

=> **shift toggle** (holds down **shift button** until released, behaves like a modifier)

*NOTE: if the back is released before RClick, shift will **persist** until release
This never naturally happens during use, so it **doesn't matter at all**.*

Scrollleft => ctrl + z (undo, hold to undo fast)

Scrollright => ctrl + y (redo, hold to rewind fast)

MClick => ctrl + s (save, various software)

Scrollup – **custom** swap line with the line directly above, VScode only

*Use paddle simultaneously to enter BackPaddle mode and move carat up
Hold **right click** to **PLACEHOLDER**
Compatible with clicking and dragging to select, and transferable.*

Scrolldown – **custom** swap line with the line directly below, VScode only

*Use paddle simultaneously to enter BackPaddle mode and move carat down
Same capacity as above, with **ONE NOTABLE EXCEPTION**:
Hold **right click** to **DUPLICATE line below** (only for Vscode, uses clipboard for other)*

Helper => ctrl + e (jump to search in chrome, centre *align* text in word editor, *go to* in VScode)

Paddle (better called *Editor*) Mode

Activation: when only the Paddle is pressed and held

Operations: text and carat manipulation, copy, paste, enter/backspace input

LClick => ctrl + v (paste) only without extraneous input; holding RClick will trigger *dual click*

RClick => ctrl + c (copy) only when pressed by itself, without having done anything else
=> ctrl + x (cut) double tap for **cut**

=> **gear toggle** (for other combinations, holds down **shift button OR other modifier** until released, behaves like a *modifier toggle*)

Warning: if the paddle is released *before* RClick, gear will **persist** until release

=> *dual click* (for other combinations) This special toggle is used to determine whether “ctrl” is used during scrolling, cycling between scrolling by *words* or *letters*

RClick (hold), proceeded by **LClick** (click and release) – this enables **select left/rightward by letter** (removing *ctrl* from scroll inputs). *Lclick* can be pressed again to cycle between scrolling by letter or word.
You can also release *Rclick* afterwards – enables **move carat left/right by letter**.

Scrollup – ctrl + left (move carat leftward by word; select left in menu, back to previous segment in YouTube; *simultaneously hold back to move carat up*.)

Transition between horizontal and vertical selection as you please.

You can hold shift while doing so to preserve your selection.

For convenience, you are able to hold shift with your left hand to select text, emulating click and drag.

Somewhat compatible with clicking and dragging to select.

Specifically, click and drag a direction to select, then continue selection with scrolling

Hold right click to hold shift without using keyboard – gear toggle

Dual Click to deactivate ctrl and move carat by letter, LClick to cycle on and off

- Ctrl always starts out activated by default whenever Paddle is pressed

- You may **move carat** or **select**, by **word** or by **letter**. Read instructions above.

Scrolldown – ctrl + right (move carat rightward by word; select right in menu, forward to next segment in YouTube; *simultaneously hold back to move carat down*. **Same capacity as above**.)

Scrollleft => backspace (hold **Rclick** (gear toggle) to input **shift + home**; select left entire line)

In File Explorer, HOLD Rclick, and you grab the MOST RECENT file from the downloads folder or the screenshots folder and move it to the currently active directory window~!

Scrollright => delete (hold **Rclick** (gear toggle) to input **shift + end**; select right entire line)

MClick => enter (hold **Rclick** (gear toggle) to input **shift + enter**; new line without break)

In File Explorer, you can quickly rename files or folders; Mclick => (F2), Enter

Hold Rclick to create a new folder (ctrl + shift + n)

Helper => ctrl + h (open history in chrome, find and replace in editors)

Dual Click to activate Placeholder

HyperPaddle (better called *Multimedia*) Mode

Activation: press the hypershift, followed by the paddle, both held down; a downward motion

Operations: assorted functions, media and window management

RELEASE => Window Arranger (WA) Activation Toggle, press again to *secure*

LClick => shift + win + s (take screenshot, without snipping tool popup)

RClick => win + ctrl + c (take screenshot via Snipping Tool, pop up editing window)

From here, available functions include editing and AI text extraction

Scrollup – ctrl + scrollup (zoom in) if WA toggled, then (Window Maximize)

Scrolldown – ctrl + scrolldown (zoom out) if WA toggled, then (Window Minimize)

Scrollleft => ctrl + win + left (Window arrange on left monitor), WA Activation

Scrollright => ctrl + win + right (Window arrange on right monitor), WA Activation

BackPaddle (better called *Secondary Editor*) Mode

Activation: press the paddle, followed by the back, both held down; a down-up motion

Activation (alt): press back, followed by paddle, both held down; a downward motion

Operations: text and carat manipulation, a few select web browsing operations

LClick => win + v (clipboard history)

paste history special controls:

- Hold the Backpaddle and scroll (up/down) to select history entry
- Hold the Backpaddle and hit Mclick (Enter) to paste

RClick => **shift toggle** holds down **shift button** until released, behaves like a modifier

input LClick (as if dual clicking) to activate **Windows Advanced Paste (shift + win + v) menu**. Includes pasting as plaintext, txt files, or AI edits.

NOTE: if the back is released before RClick, shift will **persist** until release
*This never naturally happens during use, so it **doesn't matter at all**.*

Scrollup – up (scrollup by 1 line, move carat up in editors, *use paddle to move or select carat left by word*)

*Hold shift and transition between horizontal and vertical selection as you please.
Hold right click to hold shift without using keyboard.
Compatible with clicking and dragging to select, and transferable.)*

Scrolldown – down (scrolldown by 1 line, move carat down in editors, *use paddle to move or select carat right by word*) *Same as above.*

Scrollleft => (In browsers) Ctrl + 9 Select rightmost tab

Scrollright => (In browsers) Ctrl + 1 Select leftmost tab

Mclick => Placeholder

HyperBack (better called *Data Entry*) Mode

Activation: press the hypershift, then back button, both held down

Operations: spreadsheet cell operations, code editor functions, web browsing

LClick => reposition current tab leftward, hold to swap fast

RClick => reposition current tab rightward, hold to swap fast

Scrollup – shift + scrollup (Horizontal Left Scroll)

Scrolldown – shift + scrolldown (Horizontal Right Scroll)

HyperBackPaddle (better called *Coding*) Mode

Activation: press every modifier button simultaneously, in the chord sequence *H -> B -> P*

Operations: coding, complex environment-specific commands

Scrollup – alt + scrollup (jump to previous function header)

Scrolldown – alt + scrolldown (jump to next function header)

Mclick => open **VScode** in this current folder in Windows File explorer

HyperPaddleBack (better called *Typing Input*) Mode

Activation: press every modifier button simultaneously, in the chord sequence *H -> P -> B*

Operations: Typing assistance, release chord to enter **Extended TriCanth typing Mode**

RELEASE => *Extended TriCanth Typing*
